

Baltic Summit 2023

Power Pages Masterclass – prerequisites

To take part in Baltic Summit “Power Pages Masterclass” workshop you will have to prepare few things before. Those steps below are MANDATORY to participate in hands-on labs executed during workshop.

Here are those:

1. Make sure you have Microsoft Account connected to your personal email address – if this is not the case proceed with steps here: <https://support.microsoft.com/en-us/account-billing/how-to-create-a-new-microsoft-account-a84675c3-3e9e-17cf-2911-3d56b15c0aaf>
2. Make sure you have access to **Developer M365 Tenant** – and you must be Global Admin inside this tenant (account that you will create as first one)
 - Go to <https://developer.microsoft.com/en-us/microsoft-365/dev-program>
 - Proceed with Joining to M365 Developer Program (using Microsoft Account from step 1)

- For our workshop this is not important if you will pick either Instant or Configurable sandbox (Instant will be created faster)

Set up your Microsoft 365 E5 sandbox

Choose your Microsoft 365 E5 developer sandbox:

☒ **Instant sandbox**

Includes everything you need to build Microsoft 365 apps and solutions.

The sandbox is preconfigured with 16 fictitious users, Microsoft Teams sample data pack with App Studio and custom apps preconfigured, and data for Microsoft Graph, SharePoint, and Office Add-ins development.

☐ **Configurable sandbox**

Configure your own sandbox from scratch. This subscription can take up to two days to provision and you must manually add sample data.

You can customize the domain name.

Domain name: mytenant.onmicrosoft.com

Renewable E5 subscription
Expires on Jan 5, 2023

Administrator
Admin@mytenant.onmicrosoft.com

90 days left

Users
25 user licenses

Go to subscription

Sample data packs

Users, Mail & Events, Microsoft Teams, SharePoint

Next Later

Setting up your developer subscription now

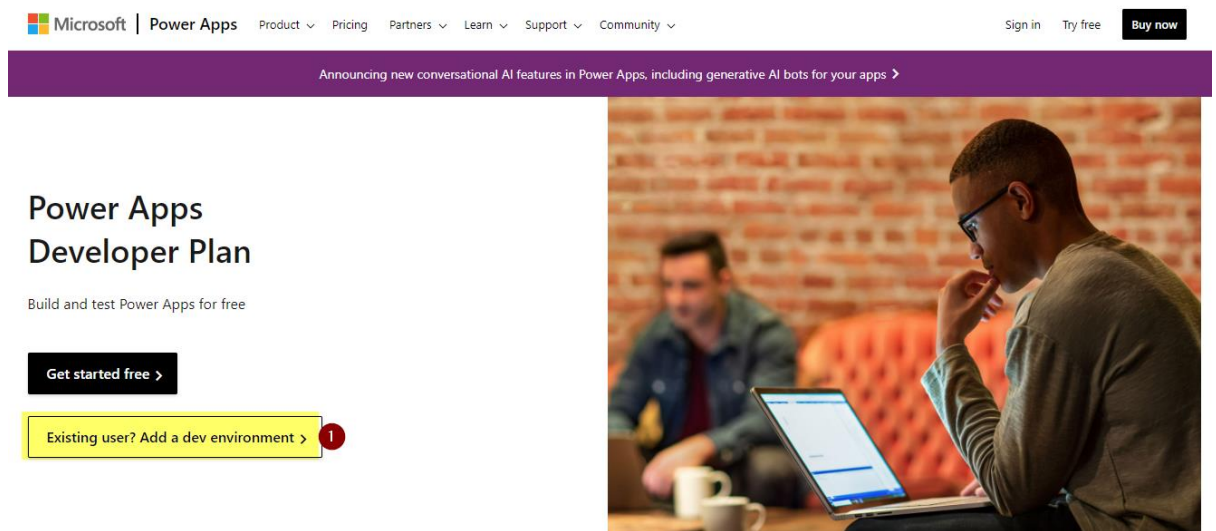

This operation should take only about a minute.

To learn more about how to work with your subscription, see [Build Microsoft 365 solutions](#).

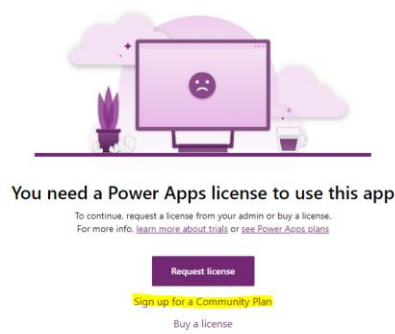

- You can setup your developer subscription using instructions available here: <https://learn.microsoft.com/en-us/office/developer-program/microsoft-365-developer-program-get-started> (OPTIONAL)

3. Join Power Apps Developer Plan using your account created in step 2 (Developer Tenant Admin account)

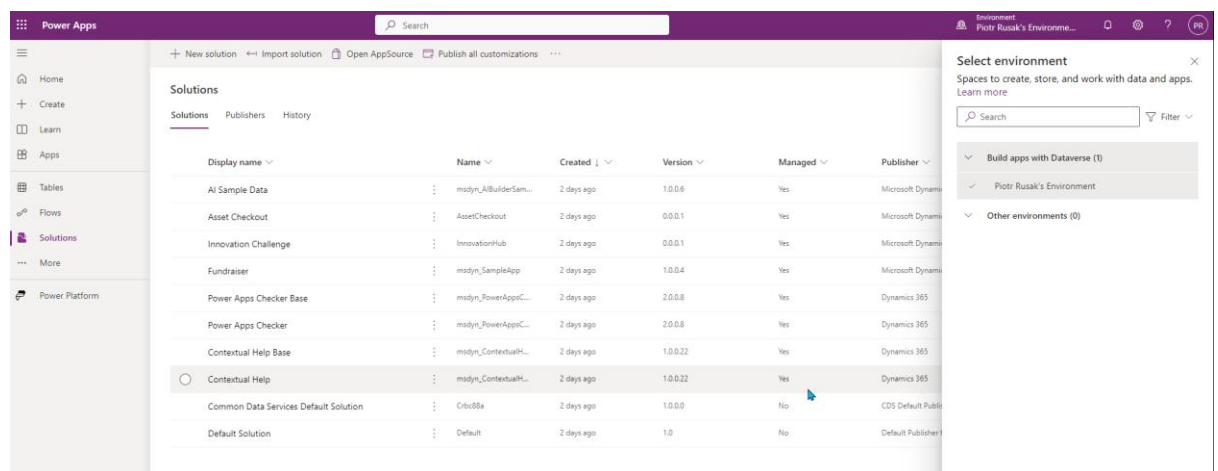

To join to this program go to link <https://aka.ms/PowerAppsDevPlan> and click “Existing user? Add a dev environment” button

Join Community Plan to acquire Power Apps license

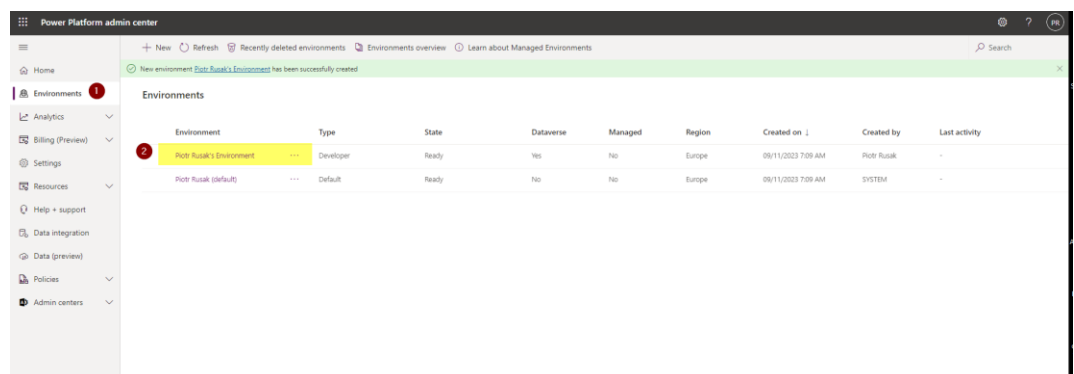

Make sure you will see Your Name's Environment in Environment Picker (top right corner of the browser window)

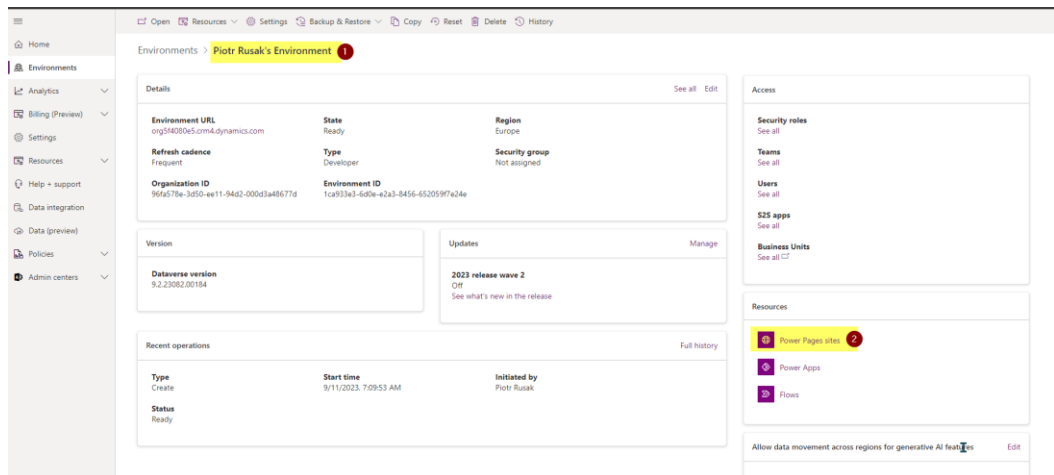

4. Go to Power Platform Admin Center – <https://aka.ms/ppac>

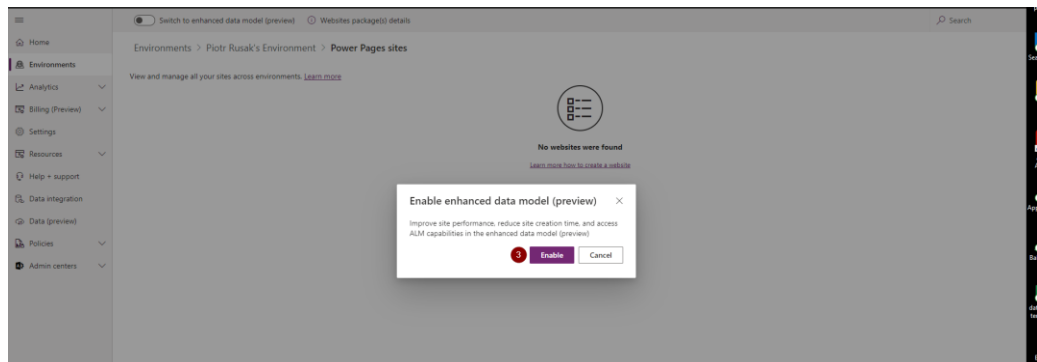

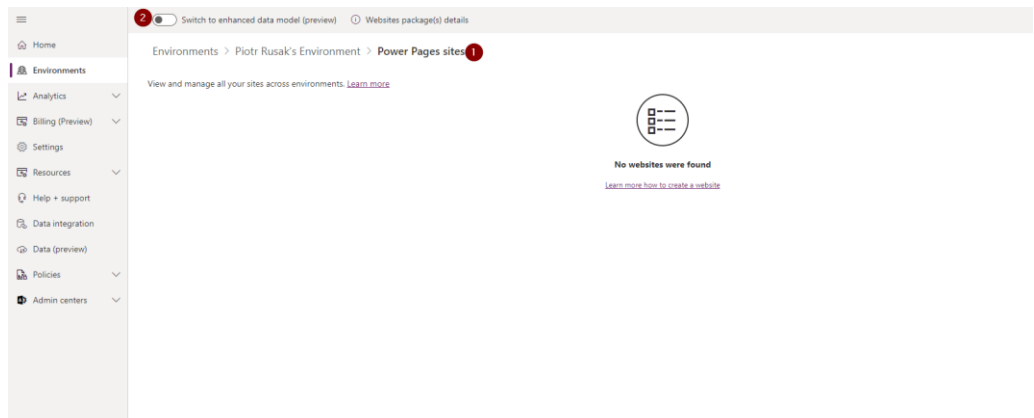

- Go to Environments section and find your newly created environment named after your name (provided in step 2)

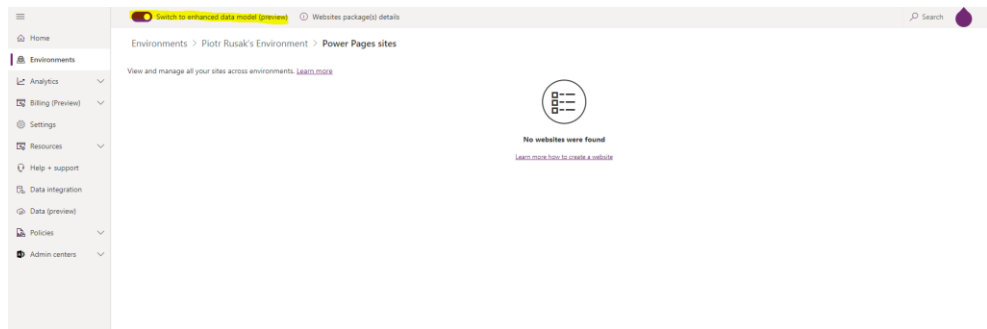

- Inside Environment details page select Power Pages sites link

- Enable “Enhanced data model (preview)” by switching toggle on top of the screen

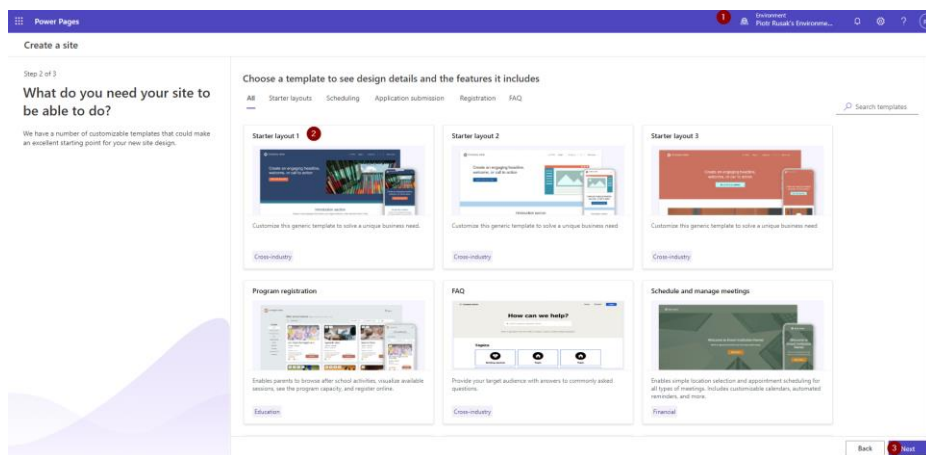

Wait approximately 1 hour and get back to Power Platform Admin Center – Environment details – Power Pages sites (make sure Switch is selected when you refresh the page)

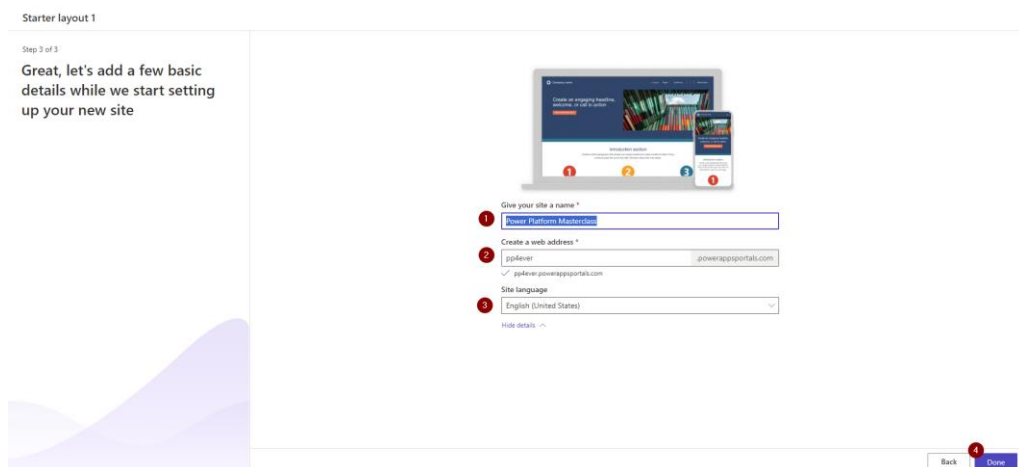

5. Create sample website in your Developer Environment:

- Go to <https://make.powerpages.microsoft.com/>
- Make sure you selected your Developer Environment (created in step 3) (make sure you have not selected Default environment)

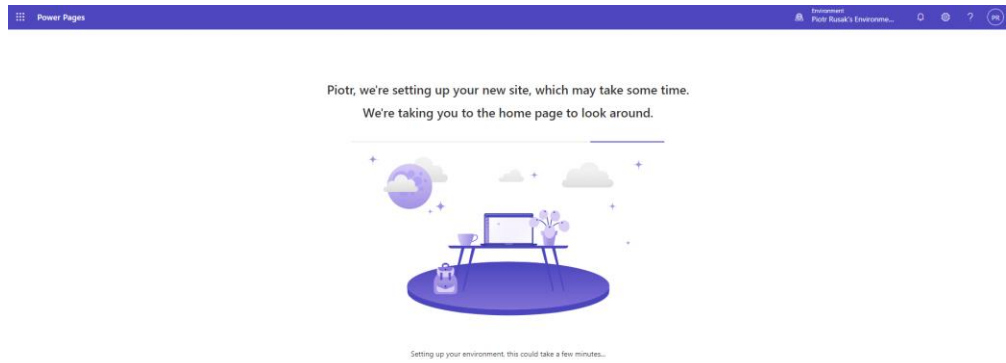

- Choose template “Starter layout 1” and proceed to next step
- Your website domain can be anything that is unique (this does not matter)

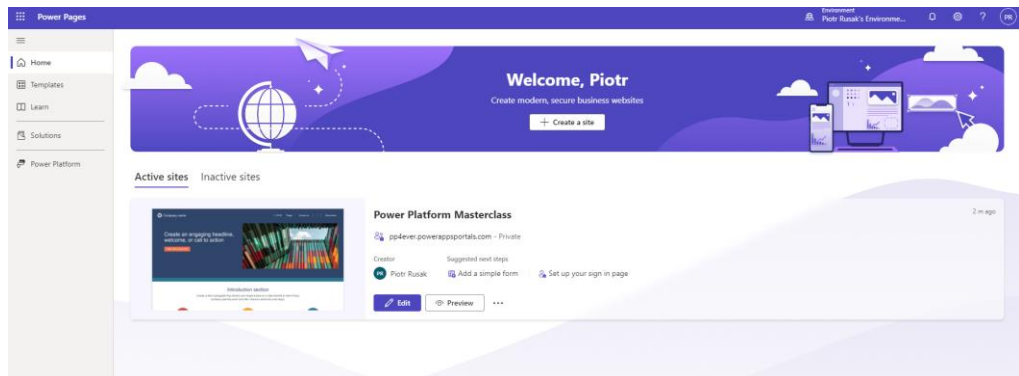

- Select Site Name / Web Address / Site Language (we recommend: English (United States)) => press Done.

- Be patient – now your website will be provisioned in your brand new Developer Environment. With Enhanced Data Model this should not take long (5-15 minutes)

- Your 1st Power Pages website should be ready and waiting for our workshop
